## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see Response pages 5-8, filed 3/7/12, with respect to claim 1 have been fully considered and are persuasive.

## **REASONS FOR ALLOWANCE**

2. Claims 1-5 and 8-9 are allowed.
3. The following is an examiner's statement of reasons for allowance: the prior art, alone or in combination fails to teach or suggest an image display device comprising: a valve of elements arranged in rows and columns, each of said elements comprising a liquid crystal one of whose electrodes, called the mirror electrode, is controlled by a drive circuit so as to display video information relating to at least one image, a coder for coding, for each image, the video information intended to be displayed by each of the elements of the valve, the video information being decomposed into two parts, a first part corresponding to a common value shared by a group of at least two adjacent elements of the valve and a second part corresponding to a specific value, and for transmitting them to said valve, wherein said drive circuit consists in: for each element of the valve, a specific drive circuit coupled to the mirror electrode of the liquid crystal of said element and intended to store the specific value associated with the video information to be displayed by said element and to apply it to the mirror electrode of the liquid crystal of said element, said specific drive circuit comprising: a first storage capacitor for storing the specific values present on a column line of the valve and

Art Unit: 2629

intended for said element, a first switch for connecting the column line to a first end of said first storage capacitor, the other end being connected to a fixed potential, a second switch for connecting the first end of the first storage capacitor to the mirror electrode of the liquid crystal of the element; and for each group of at least two elements of the valve, a common drive circuit coupled to each element of said group and intended to store said common value associated with the video information to be displayed by said elements of the group and to apply it to the mirror electrode of the liquid crystals of the elements of said group, said common drive circuit comprising: a single second storage capacitor for storing the common value present on the column line of the valve and intended for said group, a third switch for connecting the column line to a first end of the second storage capacitor, the other end being connected to a fixed potential, at least two fourth switches for connecting the first end of the single second storage capacitor to the at least two mirror electrodes of the liquid crystals of the elements of the group, the specific drive circuit and the common drive circuit that are coupled to one and the same group of elements controlling the liquid crystals of the elements of the group in such a way as to alternately display the specific values and the common value of the video information relating to the elements of the group for an image.

4. Specifically, the combination of the circuitry, as claimed, and the use of a specific value and a common value, both derived from the pixel video information, within each element are new over the prior art.

5. Mourey et al (US 5,333,004) shows a group of pixels (figure 3) which use a common value (C'01) and a specific value (C01 and C"01 respectively). However, the

Art Unit: 2629

pixel does not have the corresponding circuitry as claimed, nor does it alternate between the specific and common value.

6. Kwon (US 6,525,710) teaches a group of pixels (71 and 73 figure 7A) that receive a common value and specific value and alternate between the two (figure 7B).

However, the pixel circuitry does not correspond to that of the claimed limitations.

Further, in Kwon, each group receives a single specific value and a single common value. Claim 1 requires each element in the group to receive a specific value.

7. Ozawa (JP 2004-191574) teaches a group of pixels that that utilizes a common value and a specific value (figure 12; abstract). However, Ozawa does not teach video information intended to be displayed by each of the elements being decomposed into two parts comprising the common value and the specific value. Ozawa rather teaches the video information being input as a specific or common voltage, rather than decomposing into both.

8. Tsutsui et al (US 2002/0060674) teaches a group of pixels that that utilizes a common value and a specific value (figure 4; abstract). However, Tsutsui does not teach video information intended to be displayed by each of the elements being decomposed into two parts comprising the common value and the specific value. Tsutsui rather teaches the video information being input as a specific or common voltage, rather than decomposing into both.

9. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2629

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 7,847,773; US 6,965,365; US 7,006,066; US 2009/0278827; US 5,926,158; US 6,476,785; US 2005/0200788; US 7,425,940; US 6,933,910; US 6,628,258; US 2003/0090448; US 5,701,166.
